(B)

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: German Patent Application 101 61 365 A1 discloses the tire/wheel assembly of at least claim 1, the run-flat support member of at least claim 6, and the method of claim 10 but does not appear to qualify as prior art in this application because the June 26, 2003 publication date of the German Patent Application is subsequent to the June 24, 2003 filing date of this application. Hellweg et al. (6,463,974 B1), Glinz et al. (6,463,976 B1), Dieckmann et al. (6,619,350 B1), Glinz et al. (6,672,349 B1), and US Patent Application Publication 2002/0195183 A1 all disclose examples of the prior art run-flat support member similar to the claimed run-flat support member but wherein the circular shell is either of unitary construction or segmented in the circumferential direction and therefore is not formed by jointing side edges of at least two shell segments each having a single convex circumferential surface. Although it is well known to join together the two halves of run-flat support segments, as evidenced by UK Patent Application 2 204 841 A and German Patent Application DE 37 33 515 A1 for example, the prior art of record fails to disclose or suggest applicants' run-flat support member of claims 6-9, tire/wheel assembly of claims 1-5 including the run-flat support member, and method of manufacturing a run-flat support member of claim 10, including the circumferential shell being formed by jointing side edges of at least two shell segments to each other and each circular shell segment having a single convex circumferential surface, in the claimed environment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
